

Product Features Sheet for **OMNICIDE**

What is it? **OMNICIDE** is the benchmark gluteraldehyd/quat surface disinfectant for agriculture and food production, ideal for application in situations where some residual activity and freedom from corrosion is important.

How do you use it? Apply by spraying through a correctly calibrated sprayer, or pressure washer at reduced pressure. One third of a litre of solution per square metre will give good coverage but more may be required on absorptive surfaces. Excessive run-off is wasteful.

What does it do? **OMNICIDE** controls a wide spectrum of bacteria, viruses and fungi in soiled conditions in the short contact time of about five minutes. It is non-corrosive and biodegradable. Surface activity can last up to seven days. The quaternary ammonium content ensures good cleaning, but heavy soiling should be removed and surfaces pre-washed with a compatible detergent such as **KICKOFF**.

Do: measure the required dose and calibrate equipment accurately. Observe safety requirements. File a Material Safety Data Sheet. Write this up in your risk assessment.

Don't: mix with any other product. Be sensible about the vapour. There is a risk of skin and respiratory sensitisation. Use chemical resistant gloves (EN 374) of butyl or nitrile rubber and respirator Gas filter EN 141 Type A for gases/vapours of organic compounds and the other recommended personal protection especially when handling the concentrate. Do not return product to the can or contaminate the can.

Pack sizes? 5L or 25L
